BeAGLE production status

➢ Previous *BeAGLE* data which we simulated was produced with v1.02. Now we are running with v.1.03.02.

➢ For ePIC simulation running, we have produced the following files:
  - 18x110 GeV/A e-U events. These have been converted to HepMC format and have had beam effects applied.
  - 18x110 GeV/A e-Pb events. These have been converted to HepMC format and have had beam effects applied.
  - 18x110 GeV/A e-^{102}Ru events. These have been converted to HepMC format and have had beam effects applied.

➢ For Isaiah's studies, I have produced the following files:
  - 18x110 GeV/A e-U events with formation times of 2, 10, and 20 fm/c. These files need to be converted to the text file format I provided previously.
  - 18x110 GeV/A e-^{78}Kr events with formation times of 2, 10, and 20 fm/c. These files need to be converted to the text file format I provided previously.
